

The 21st International Symposium on Geo-disaster Reduction

(Second Announcement)

5-8 August 2023, Shanghai, China

In recent years, with the continuous development of marine resources, marine geological disasters have occurred frequently, which not only affected the construction of marine engineering, but also endangered the operation of engineering projects. They often bring a serious threat to people's lives and property, causing huge casualties and economic losses. New requirements are put forward for building a safe and resilient coastal and marine system.

To discuss the hot issues in the field of marine geological disaster reduction, this symposium, the annual event of the International Consortium on Geo-disaster Reduction (ICGdR), aims to bring together academic scientists, leading engineers, and students to exchange and share their experiences and research results.

Symposium Theme and Topics

Theme:

A new era for safe and resilient coastal and marine systems
